NIVESH PRITMANI

DEVSECOPS ENGINEER · SECURITY PLATFORM ENGINEERING · CLOUD & INFRASTRUCTURE

Ahmedabad, India | niveshpritmani@gmail.com | linkedin.com/in/nivesh-pritmani-990316227 | github.com/SnazzyNivesh522

PROFESSIONAL SUMMARY

DevSecOps Engineer promoted twice in 18 months at SharkStriker, growing from building security software to owning the multi-cloud and on-prem infrastructure it runs on. Operates production across 4 AWS regions, 2 OCI regions, 2 customer data centers and a 40+ VM VMware estate, and debugs every layer from application and Elasticsearch down to NAT, routing and cabling. Known for security automation that removes manual work, hardened network architecture, Vault/PKI-based secrets, and leading company-wide engineering change.

PROFESSIONAL EXPERIENCE

SharkStriker Pvt. Ltd. · Cybersecurity (MDR / SOC platform) · Ahmedabad — **Jan 2025 – Present**

▸ **DevSecOps Engineer** — Jun 2026 – Present

Software Developer (Security) — Jan 2026 – May 2026

Associate Software Developer — Jan 2025 – Dec 2025

Promoted twice in 18 months, from security software development to ownership of production infrastructure.

Cloud & Network Architecture

- **Multi-cloud operations:** Run production and staging across 4 AWS regions, 2 OCI regions and 2 customer on-prem data-center regions (~10 servers each): EC2, S3, IAM, VPC, SES, SQS and notification services.
- **7-region network architecture:** Architected the AWS/OCI VPC/VCN design for 7 regions (US, IN, ZA, MX, SA, AU, MY) on a single summarizable cloud supernet planned around 20+ on-prem and VPN ranges to rule out overlap; replaced bastion SSH with AWS Systems Manager Session Manager.
- **Attack-surface reduction:** Redesigned regional exposure from per-server public IPs to a single controlled ingress with public/private subnet segmentation and restricted outbound Internet access.
- **Keyless customer cloud onboarding:** Implemented customer AWS integration for the SIEM/log-analytics platform without long-lived customer access keys.
- **On-prem & virtualization:** Administer the internal staging/production VMware estate (3 ESXi hosts, 40+ VMs); troubleshoot end-to-end from applications and VMs through hypervisors, hosts, firewalls, switches, Ethernet cabling and hardware faults.

Reliability & Data Platforms

- **Elasticsearch resilience:** Architected disaster recovery and S3-backed searchable snapshots, keeping older SIEM data searchable from object storage while cutting pressure on primary disks.
- **Cluster recovery under pressure:** Recovered a production Elasticsearch 7.14 SIEM cluster from disk flood-stage (read-only indices, 1,253 primary shards, 962 unassigned) with zero indexed-data loss; routinely resolve shard allocation, replica and indexer failures.
- **Production incident response:** Restored HTTPS for 3 domains after an ISP link failure broke DNAT and Cloudflare load balancing across 4 ISPs, by tracing port-443 NAT, routing and load-balancer behavior and correcting traffic flow.
- **Observability & pipelines:** Operate infrastructure monitoring with LibreNMS and Nagios plugins; debug Logstash/Filebeat pipelines and WHMCS/MySQL integration failures.

Security, Identity & Secrets

- **Secrets & PKI:** Implemented TLS/mTLS and an internal CA with certificate renewal workflows; took HashiCorp Vault from staging to production for PKI and secrets consumed by frontend, backend and Python teams.
- **Platform & identity migration:** Led a two-phase migration off WHMCS to a React-based architecture with Keycloak and Microsoft Entra External ID; solved the IdPs' lack of per-user redirect URIs with a shared callback, OAuth state and app-side routing. Upgraded WHMCS 13.0 → 13.3.3 and PHP 7.4 → 8.1.

Platform Engineering & Developer Experience

- **Engineering-wide CI/CD adoption:** Spearheaded the company's move from manual deployments to a self-hosted GitLab workflow, authoring documentation and training on Git, branching, versioning and CI/CD for developers at every level; standardize pipelines with Ansible, Docker/Podman and shell automation.
- **API platform consolidation:** Consolidated multiple standalone FastAPI/Flask services into a single OpenAPI contract with change notifications for frontend/BFF consumers, keeping end-user auth centralized at the BFF layer.

Security Engineering Products

- **ASM / VAPT automation platform:** Architected a customer-facing attack-surface management and automated VAPT platform orchestrating 20+ recon and VA tools for typical 40–60 IP scopes, cutting manual VA/recon effort by ~80% so testers focus on penetration testing and new vulnerabilities.
- **Vulnerability intelligence:** Built automated CVE pipelines from NVD and MITRE data with daily sync, enriched with CWE, CAPEC, ATT&CK and D3FEND and mapped to ISO 27001, NIST CSF, SOC 2 and NIST SP 800-53 controls.
- **Brand protection:** Developed a cybersquatting/impersonation detection engine generating homoglyph, keyboard, typo, TLD and dictionary mutations, scored with WHOIS, DNS and infrastructure fingerprinting.
- **Content-moderation at scale:** Engineered a classification service over 900GB+ in S3 (~6M files, ~5.3M images), auto-flagging ~100K policy-violating images and escalating ~3,600 high-risk items to priority human review.

BISAG-N · *Research Intern* May 2024 – Aug 2024

- **AI decision support:** Built AI-powered precision support systems for agriculture and forestry on large geospatial datasets (Python, TensorFlow, QGIS, Google Earth Engine), improving data accuracy by 40% and cutting analysis time by 30%.

TECHNICAL SKILLS

Cloud & Infra: AWS (EC2, S3, IAM, VPC, SSM, SES, SQS), OCI, VMware ESXi, Proxmox, Linux, Docker, Podman, Terraform (foundational)
Security: ASM/EASM, VAPT automation, vulnerability intelligence, TLS/mTLS, internal PKI/CA, HashiCorp Vault, network hardening
Identity: Keycloak, Microsoft Entra External ID, OAuth 2.0 / OIDC, IAM
CI/CD & Automation: GitLab CI/CD, Ansible, Bash/shell, Python automation, Kestra
Networking: TCP/IP, DNS, routing, subnetting, NAT/DNAT, firewalls, switching, IPsec, WireGuard, Cloudflare load balancing
Data & Observability: Elasticsearch, Logstash, Filebeat, PostgreSQL, MySQL, MongoDB, Redis, MinIO/S3, LibreNMS, Nagios
Languages & Backend: Python, Go, JavaScript, FastAPI, Flask, React (working), REST/OpenAPI, PHP (WHMCS)
Security Tooling: Nuclei, OpenVAS, Nessus, OWASP ZAP, Nmap, SQLMap, Metasploit, WafW00f

EDUCATION

B.Tech, Information and Communication Technology · **CGPA 9.65 / 10** Oct 2021 – May 2025
Pandit Deendayal Energy University, Gandhinagar, Gujarat

RECOGNITION & PUBLICATION

Rising Star Award, Q1 2025 — SharkStriker. Recognized for rapidly automating core VAPT tooling and improving testing efficiency.
Springer, Aug 2025 — *"Predicting Agricultural Crop Yield in Indian States Using Machine Learning Models."*
